Signalling Tester / Base Station Simulator

MD8475B

Here's the Base Station Simulator It Answers All Your Questions.

Reproduce the World's Communications Systems in a Small Workbench.

As mobile terminals, such as smartphones, become increasingly high performance and diversified to enhance the user experience, carriers are starting to deploy LTE-Advanced technology as the next stage after LTE in speeding-up networks and meeting the needs of smartphone users. Additionally, the automotive world is pushing forward with new innovations, such as the connected car and self-driving vehicles, based on wireless communications technologies. The Signalling Tester MD8475B is a base station simulator reproducing communications between base stations and UEs. It supports the full range of communication standards including LTE, and the Anritsu SmartStudio user interface, eliminates the need to create complex test scenarios, assuring efficient tests of complex UEs.

Changing the Smartphone Test Environment

| Scenario-less Mobile Phone Function Tests

Supports Versatile Smartphone Tests

Complex tests of multifunction smartphones are supported by the all-in-one MD8475B with interactive SmartStudio interface.

LTE Cell
W-CDMA Cell

Multi-cell Testing
Verifies correct mobile handover by changing settings between neighboring base stations.

Emergency
Simulates emergency notifications, such as earthquake early warning, which are hard to test on live networks.

Voice / VoLTE
Tests both basic voice call and Voice over LTE (VoLTE).

Celler

SIP/IMS

WiFi

Battery Management
Simulates various environments for measuring battery life.

Packet Communication
Evaluates throughput by changing base station settings and equips built-in SIP server.

WLAN Offload
Simulates a policy delivery server and dedicated gateway for distributing traffic over a WLAN.

---

1 The connection status of UE and SmartStudio are easy to understand at a glance from the block diagram.

Automated Confirmation of Existing Mobile Functions using SmartStudio

SmartStudio Manager helps improve development efficiency by automating checks of existing functions at UE development, such as Voice, SMS send/receive, and other tests.

All-in-One Support for LTE and Other Communications Systems

All the world's main communications technologies, such as triple-system LTE/W-CDMA/GSM mobiles and TD-LTE/TD-SCDMA/GSM as well as LTE hybrids, can be tested using the all-in-one MD8475B.
(Requires installation of optional units and software for each systems).

3 Double-clicking the base station band displays the base station status. Changes to base station parameters during testing are reflected immediately on-screen.
4 Details of the Smartphone and SmartStudio status can be verified easily. Changes to reject parameters during testing are reflected immediately on-screen.
5 Both base station parameters and packet communications can be controlled. Changes to status change parameters during testing are reflected immediately on-screen.
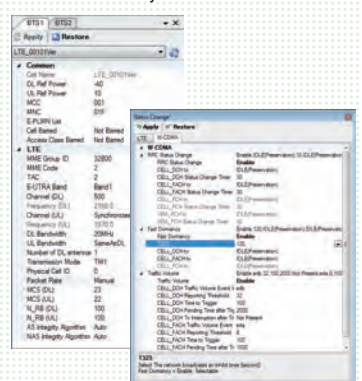

Signalling Tester MD8475B Applications

Configuring Multi-cell Test Environment

Performing UE tests between communications systems (handover tests) usually requires set-up of several measuring instruments and creation of complex scenarios. SmartStudio eliminates these problems by providing a simple test environment for fast and efficient testing.

Multi System Configuration

Roaming and power consumption tests of UEs require multi-cell connections.
The MD8475B supports up to 8RF tests.
The SmartStudio GUI makes it easy to set multi-system test environments, especially for the latest Carrier Aggregation (CA) wireless standards.

Multi-cell Test Configurations

Tests of UEs moving between cells take the Selection, Redirection, Handover, and other conditions into consideration, depending on the UE and base station conditions. SmartStudio can register these UE and base station conditions, including the RF power, as a test case, making it quick and easy to evaluate UE behaviors and reproduce failures. Test cases are also useful for general UE evaluations when reproducing Handover failures.
Small-cell Switching Tests

Macrocell, small-cell, and femtocell base stations are being installed to provide wide coverage for people moving freely between base stations; SmartStudio provides easy test sequences for preferential capture of small-cells.

2-cell Testing Support by SmartStudio

Configuring Multi-cell Test Environment

Carrier Aggregation Tests

The MD8475B supports LTE CA 2CC/3CC/4CC/5CC for throughput performance tests of UEs, such as smartphones using high-speed data networks.

Configuration	MD8475B
Operation Software	SmartStudio
Required CA Option	MX847550B-040, MX847550B-041 (3CC), MX847550B-042 (4CC), MX847550B-043 (5CC), MX847570B-051
RF	4TX/2RX (standard), 8TX/4RX (option)
Support for DL CA	2CC SISO, 2CC MIMO (2×2), 2CC MIMO (4×4), 3CC SISO, 3CC MIMO (2×2), 3CC MIMO (4×4), 4CC SISO, 4CC MIMO (2×2), 4CC MIMO (4×4), 5CC MIMO (4×4)
UE Category	Cat.4, Cat.6, Cat.9, Cat.11, Cat.16, Cat.18, Cat.19

SIM Connectivity Test

Dual SIM Dual Standby (DSDS) and Dual SIM Dual Active (DSDA) tests of dual-SIM UE can be performed using two sets of MD8475B. Additionally, Single SIM Dual Standby (SSDS) and Single SIM Dual Active (SSDA) of single-SIM UE can be performed using one MD8475B. These test environments can be fully automated using SmartStudio Manager.

Test Example:

The power consumption and throughput of a dual-SIM UE can be confirmed while the UE is making a voice call using SIM1 and transferring packet data using SIM2.
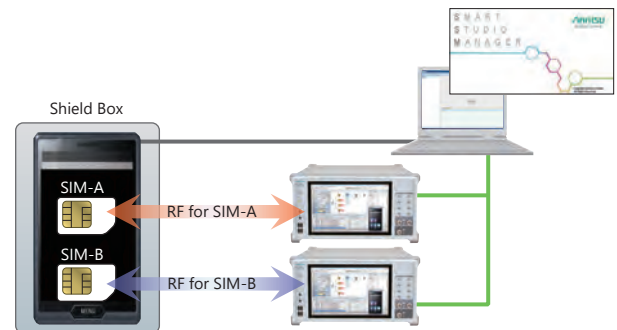

Simple Throughput Test Environment

Throughput testing until now

- It needs to be adjusted for each application about radio layer settings and server settings.
- Performance depends on the PC specification and the load of Ethernet.
Throughput Testing

- Single GUI supports to adjust for each application about radio layer settings and server settings.
- Performance is independent from PC specification and the load of Ethernet.

For the transmission and reception of the UE, use iPerf application which is widely used for throughput testing.

Signalling Tester MD8475B Applications

Data Packet Communications

Data packet communication environments are complex, but SmartStudio makes it easy to resolve troublesome packet bottlenecks, shortening evaluation times.

Versatile Server Environment

Because the MD8475B pre-installs Windows 10, commercial application servers can be easily installed.

Voice Call	Video Call	Packet Call	SMS	MMS	SMS-CB
Browsing WAP/HTTP	Contents Download	Streaming	DRM	E-Mail	SyncML

Status Evaluation

A full line of function tools can be used to check communication status, including throughput, ACK/NACK counts, and RF monitoring. Simultaneous checking of multiple layers allows quick troubleshooting during data communications.

Throughput Monitor
Checks data communications each layer for each BTS
Counter
Displays detailed information, including ACK/NACK and MCS

Real Time Monitoring
RF Monitor
Displays TRx power for frequency and channels

Genuine Application Test Environment

Connecting the MD8475B to the Internet supports Web application tests using UEs under development to verify actual in-use power consumption and throughput before market release.

Voice Call Evaluation Environment

The need for voice-call evaluations has not changed even with the spread of LTE services. However, some voice-call test items, such as the access barred condition and emergency calls, are not easily evaluated on live networks. SmartStudio supports comprehensive evaluation of UE under high-load conditions, such as testing of simultaneous voice calls and other functions.

3G/2G Voice Calling Test

Just making voice settings using SmartStudio is all that is necessary for voice tests with the MD8475B.

Setting Roaming and Registering Address Book

When performing incoming-call tests of W-CDMA/GSM UE, SmartStudio can display any of 'Public', 'National', 'International', and 'Unknown' on the UE. Additionally, when the incoming call number matches a preregistered number in the address book, the name associated with the number is displayed.
Setting Identify Type

When performing incoming call tests of W-CDMA/GSM UEs, either IMSI or TMSI can be chosen for the UE Caller ID using Paging.

Voice Call (IMSI or TMSI)

MD8475B

Voice over LTE Tests

Since LTE uses the data network, Voice over LTE (VoLTE) communications also use the data network; SmartStudio simplifies VoLTE tests.

Loopback Tests of VoLTE/Video

The SmartStudio CSCF function supports VoLTE tests (AMR/W-AMR Codec, etc.) in the loopback mode.
In addition to an IMS server, VoLTE tests require a variety of LTE settings about multi-PDN. Not only does SmartStudio support multi-PDN[1], but it it also supports packet filter and QoS settings.
Additionally, loopback audio data can be changed using the RTP function.
At VoLTE loopback testing, as well as looping voice data sent to the terminal from the network back from the terminal, the voice data can be changed to the MUTE status or to a fixed pattern to perform communications quality tests and battery consumption measurements requiring good reproducibility.[2]

*3: RoHC settings require the MX847550B-060 option. The RTP/VDP/IP (0x0001) and UDP/IP RoHC (0x0002) profiles are supported.

Signalling Tester MD8475B Applications

Voice Call Evaluation Environment

Testing Voice Calls from LTE to 3G/2G

A variety of technologies are used when a UE moves between systems from an LTE to 3G/2G cell. Configuring a 2-cell test environment using SmartStudio supports LTE and 2G/3G system voice call tests such as CS Fallback and SV-LTE (Simultaneous Voice and LTE).

CS Fallback
① LTE: Communications by PS
② Receive call by CS and notify UE of incoming call via LTE from 2G/3G system
③ Connect voice call by CS

SRVCC
① LTE: Calling over VoLTE
② Transfer 3G/2G information from base station before moving between systems
③ Continue voice call without interruption

SMS Tests

SMS and MMS are popular messaging services used worldwide. Exchanges between UEs as well as the number of verification items are both increasing because more direct control of UE is being attempted now.

Sending/Receiving SMS Text Messages

SmartStudio has a dedicated SMS server supporting sending and receiving of SMS messages at any PS or CS network setting. Multiple SMS messages can be preregistered for continuous sending and CBS messages can be sent too.
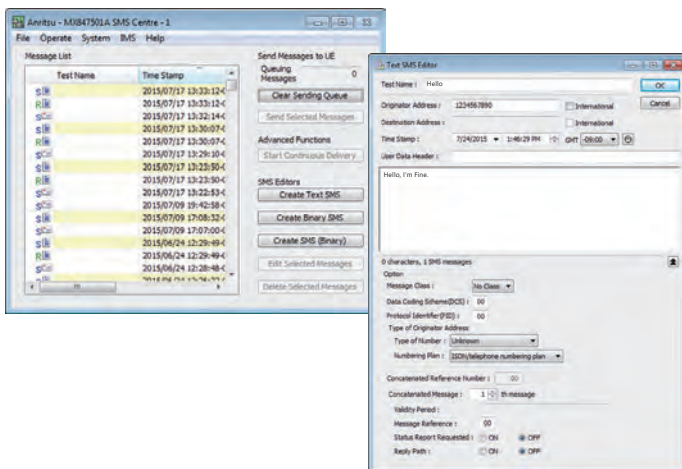

Sending Binary SMS

The MD8475B can send binary messages as SMS supporting remote control of the UE. Additionally, general evaluations, such as behavior when receiving an SMS during a voice call, can be evaluated to help prevent problems occurring in the field.

MD8475B

Signalling Tester MD8475B Applications

IMS Service Tests

SmartStudio has a built-in standard server environment for running IMS server functions for easy service tests, including VoLTE, SMS over IMS, etc.

SIP Registration of a Non-IMS UE
Typical Connection Procedure
1. PS Attach: Connect to Data server.
    → Get address using DNS, etc.
2. SIP Regist:
    → Depends on application.

⇒ One PDN is required.

SIP Registration of an IMS UE

Typical Connection Procedure
1. IMS Regist: Connect to CSCF server using SIP.
2. Data Communication: Connect to Data server.

⇒ Consequently, two or more PDN required.

Standard IMS Server Function

CSCF (Call Session Control Function)
Supports standard server function for VoLTE and SMS over IMS tests as well as voice data loopback function. IPsec is supported too.

DHCPv6 (Dynamic Host Configuration Protocol v6)
Allocates IPv6 address and notifies DNS/SIP server address to network node.

DNS (Domain Name Server)
Operates as DNS cache server.

NDP (Neighbor Discovery Protocol)
Supports function to transmit RA (Router Advertisement) and periodically transmit RA to RS (Router Solicitation).

NTP (Network Time Protocol)
The UE and MD8475B times are synchronized by sending time data in response to an NTP request.

PSAP (Public Safety Answering Point)
The UA (User Agent) and voice data loopback function support PSAP simulation for running IMS Emergency tests.

XCAP (XML Configuration Access Protocol)
This function supports updating, referencing, and deleting of XML format file data (XCAP documents).

SMS over IMS Setting

UE can register with CSCF server, and can transmit and receive SMS over IMS.
Ping Sending Function

The Ping sending function is used to verify the connection of the device under test to the network.

IMS Options

RCS Basic Option MX847570B-083

Rich Communication Suite (RCS) is the next evolutionary step in deploying existing simple voice and messaging (SMS, MMS) services on various networks and UEs with "rich" communications.
Installing this software supports RCS defined tests of Instant Messaging (IM), Address Book, and Contents sharing.

Item	Note
Configuration & Registration	HTTP (S) based support
Capability Discovery	
Standalone Messaging	
1-to-1 Chat	
Group Chat	
File Transfer	
Content Sharing	
Social Presence Information	Geolocation service not supported
IP Voice Call	IR.92 based support Interaction with other RCS services not supported
IP Video Call (IR.94)	IR.94 based support

RCS Service Image
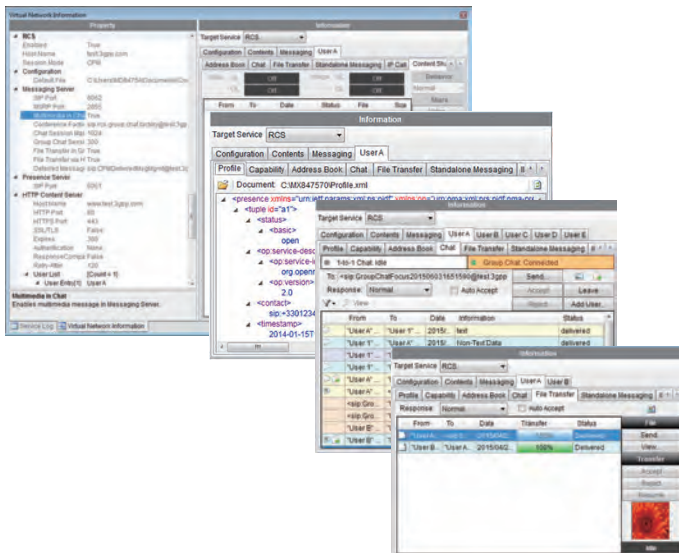

GBA Authentication Option MX847570B-084

The software option references the 3GPP GBA Authentication algorithm to simulate the authentication procedure required when connecting to the Internet via networks other than Home Networks.

HSS: Home Subscriber Server
BSF: Bootstrapping Server Function
NAF: Network Application Function
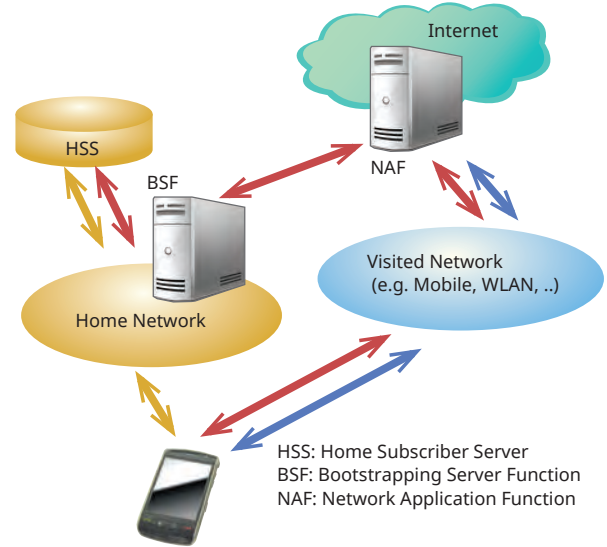

IMS Early Media Option MX847570B-085

The software option simulates the IMS Early Media sequence.
It supports MRFC, MRFP, etc., nodes and can authenticate service functions such as customized ringtones from the network side.

NRBT: Function for recovering RBT (ring back tone) from network rather than from UE

The recovery status (recovery possible/not possible/recovering/stopped) for each session is displayed on the Information screen.
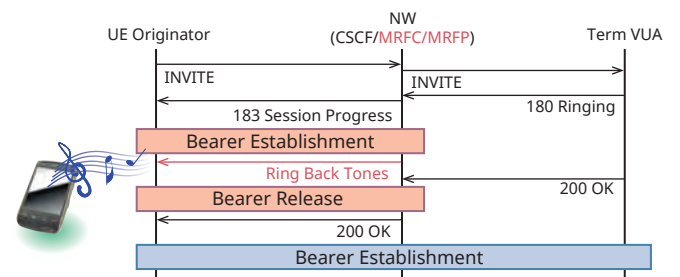

Alert-Info: Provides substitute ring back tone using Alert-Info, one of the Early Media switching function
Signalling Tester MD8475B Applications

IMS Options

RTP Frame Control Option MX847570B-086

This software controls the media data (RTP packets) during VoLTE communications. In addition to the MUTE condition and Fixed pattern, the data itself can be delayed; it can be used to configure the static stage required at audio evaluation and battery consumption measurement.
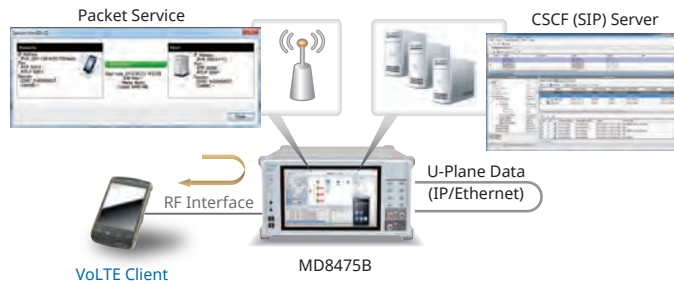

IMS Script Basic Option MX847570B-060
XCAP Script Option MX847570B-061

The software option can be used to edit and create SIP messages/XCAP messages using a ladder sequence to simulate the CSCF server/XCAP server behavior. Not only can configure a test environment from the service designing specification stage, but also user-specific tests, such as quasi-normal and abnormal conditions, can also be tested to easily support every test requirement.

Property Field:
  Network parameters such as IP address are set here.

Scripting Field:
  Sequence messages between the UE and CSCF are edited and executed here.
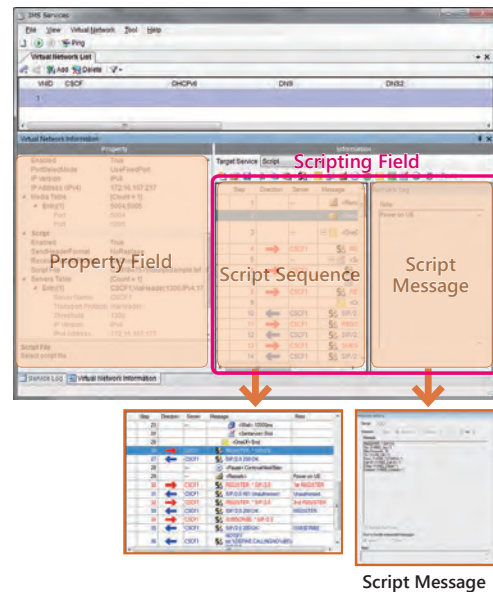

Script Message

IMS Log Import Option MX847570B-062

This software option enables importing Wireshark logs, and create IMS script automatically. This Script is editable using Add-in Sever window. This option help flexible evaluation of IMS.

Signalling Tester MD8475B Applications

New Services

New network services are being deployed at an increasing rate, requiring more-and-more tests for UEs supporting such new services. The MD8475B makes it easy to support new mobile test environments.

WLAN Offload Tests

Offloading data traffic to WLAN networks is being deployed as a technology for preventing traffic congestion on mobile networks. The MD8475B supports a WLAN data offload test environment.

WLAN Offload Basic Option MX847570B-070

The software option provides functions for forwarding packets between the UE and networks with both Trusted non-3GPP Access and Untrusted non-3GPP Access authentication functions, as well as for monitoring packets graphically.

ePDG Option MX847570B-071

The software option supports the IKEv2 key exchange procedure and IPsec communications functions for Untrusted non-3GPP Access network authentication.

ANDSF Option MX847570B-072

The software option supports the function for setting and distributing the system selection policy between 3GPP and WLAN (distributes Policy and Discovery Information according to request from UE, and receives Location and Profile reports from UE).

Extended ePDG Option MX847570B-073

The software option supports configuration of an ePDG status fault test environment for inserting errors into the ePDG sequence, setting timeouts, etc. Additionally, this option can be used to support Fast Re-Authentication (EAP-SIM/EAP-AKA) tests without the need to generate UE-side authentication keys.
Wi-Fi Calling Evaluation Environment

Wi-Fi Calling is a function for making voice calls and sending/receiving SMS over WLAN. Using this function, voice calls can be made using the telephone number registered inside the SIM card. Combining the MD8475B with the WLAN option supports verification of Wi-Fi Calling voice calls as well as handover tests from VoLTE to Wi-Fi Calling and vice versa.
Power Consumption Test

SmartStudio supports detailed settings such as changes to the UE RF output and stopping packet communications.

Base Station Settings

Any messages, such as Paging Cycle, UL TPC, etc., can be sent to the UE*.

Support W-CDMA CPC, Ec/Ior, etc.
*: The settable items differ by the systems.

Packets Communication State (RRC State Change) Settings

When packets stop passing over the network during data packet communications, the Cell Status can be transitioned at a specific timing to switch the UE to any RRC State. This is useful for configuring a test environment simulating a real network when testing battery life.
Check UE Tx RF Power

Quick TRX Diagnosis MX847506B

Adding RF Measurement supports verification of UE Tx RF power.
A UE power consumption test environment can be configured easily by combined use with SmartStudio base station settings from the UE.
Further, BLER can be verified using graphical or tabulated data.
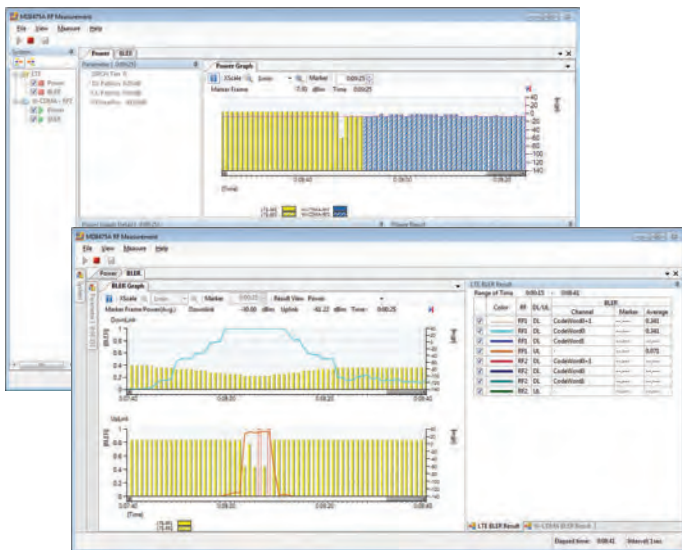

Power Consumption Test using SmartStudio Manager

The MX847503A SmartStudio Manager software is bundled with test cases for measuring the UE power consumption. In addition, the MX847503A can also control peripheral devices simultaneously, shortening the time required for configuring UE test environments.

21
Flexible Base Station Settings

Base station settings are essential for testing UE connections. Not only does SmartStudio support frequency band and Tx and Rx power settings, it can also be set to behave as a real base station.

Setting Base Station Parameters

Cell Parameter Settings

Up to 32 base station parameters can be saved in one file to prevent setting errors and assure fast, smooth testing when making slight changes to frequency and bandwidth before retesting.

32 cells per system (Total 160 cells)

At-a-Glance Confirmation of UE Performance

Moving the mouse cursor over the SmartStudio UE icon displays a summary of the UE capability information for easy confirmation of the categories, bands, etc., supported by the UE under test.

UE Capability Information
LTE
  Access Stratum Release = Rel.10

	Supported Band	GSM E

Base Station Power Settings

The Tx/Rx power of the base station can be changed during testing to simulate Out-of-Service tests by stopping RF on Smartstudio.
Setting Neighbor Cells

Neighbor cells can be set to display the mix of multiple cells for a UE graphically.

Signalling Tester MD8475B Applications

Creating Environment for Difficult Tests on Live Network

Some UE tests cannot be run on a commercial live network and are difficult on a test network.
SmartStudio makes it easy to support these tests.

Reject Tests

Attach Reject/Ignore

By setting specific messages, UE connection request can be rejected when the UE tries to connect the base station.
In addition, the base station ignores messages from the UE by setting 'Ignore', enabling confirmation of the UE behavior when messages are ignored.
APN Reject

By setting specific messages, UE connection request can be rejected when the UE connects to the network.

Barred Call and Emergency Call Tests

Access Class Control

Sometimes, carriers limit access at events where there are too many people trying to call at once or during abnormally busy times like New Year. SmartStudio can configure an access control test environment, which is difficult to do on a live network.

Emergency Call Test

Obviously, emergency calls cannot be tested on a live network but this is an essential test that must be performed. SmartStudio offers emergency call test settings and execution.

System	Control Method	Operation
W-CDMA/ GSM	Not Barred	No Access Control
	Barred	Call barring for all communications
	Emergency	Call barring for communications except emergency call

Emergency Alerts Tests

Using the built-in SmartStudio PWS center function supports sending of emergency alerts like earthquake and tsunami warnings to the UE*.
ETWS/CMAS messages can be sent at any timing simply by selecting created/edited messages.

- ETWS (Earthquake and Tsunami Warning System used in Japan)
- CMAS (Commercial Mobile Alert System) North American Federal and state government system for sending standard-format text and audio messages to TV broadcast stations

*: Supports LTE/W-CDMA/GSM.

Earthquake and Tsunami Warning

Signalling Tester MD8475B Applications

Configuring eCall Compliance to Application Test Environments

This solution makes it easy to configure an environment for emulating the eCall emergency rescue information system for automatically transmitting traffic accident information, including accident location, as well as for making voice calls to an emergency assistance Public Safety Answering Point (PSAP). Since emergency calls cannot be tested on live communications networks, combining the Signalling Tester MD8475B and eCall Tester MX703330E software is the perfect answer to testing IVS (In Vehicle System) communications functions.

eCall Tester MX703330E

The MX703330E emulates the eCall system IVS and PSAP communications sequence. It supports quasi-normal test of MSD timeout that are hard to simulate on a live network, as well as comparison of reference MSD (expected) and received data.
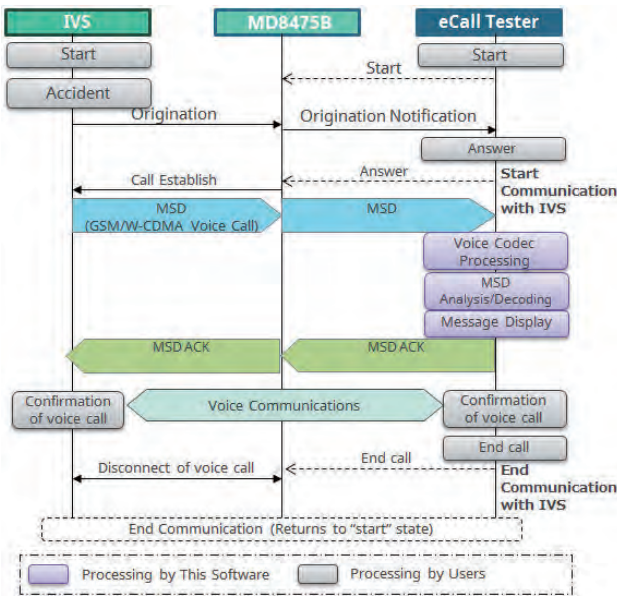

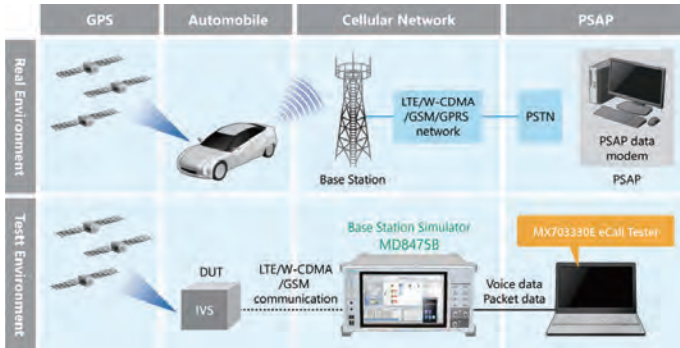

Features

- EN16454-compliant
- Implements communications sequence tests between IVS and PSAP
- Trace-displays status of eCall communications (MSD-Voice) and MSD communications (in-band modem)
- Displays in-band modem sequence and MSD decode data (conversion to meaningful data) execution results and outputs as data file
- Sets reference MSD (expected values) and displays results of comparison with received MSD
- Simulates base station operation in eCall Tester background, making specialist mobile protocol knowledge unnecessary for eCall evaluation
- Performs external control of eCall tester using SmartStudio Manager automation tool to perform PSAP operations

EU eCall Compliance Test

European Commission regulation (EU) 2017/79 approved sale of new M1 and N1 category* in-vehicle eCall equipment from 31 March 2018. eCall is an emergency rescue information system for automatically transmitting traffic accident information, including accident location, as well as for making voice calls to an emergency assistance centre, or Public Safety Answering Point (PSAP).
The eCall Tester with EN 16454 PSAP server function supports configuration of the type-certification test environment. Additionally, the interactive GUI simplifies parameter changes, while display of real-time MSD analysis data improves the efficiency of pre-compliance testing, including debugging.

* M1 Category: Passenger vehicles with driver and 8 or less seats
   N1 Category: Trucks up to 3.5 tonnes max. load weight

NG-eCall Test

This test evaluates the in-vehicle system (IVS) supporting next-generation eCall over LTE (NG-eCall).
Previous eCall systems transmit eCall data (MSD) using 2G GSM and 3G UMTS networks based on the ETSI and CEN standards.
On the other hand, European network operators are beginning to abandon GSM and UMTS networks after 10 years of operations as they transition to 4G LTE and 5G infrastructure.
eCall systems are also following suit and are progressing with development of next-generation NG-eCall emergency response systems using 4G LTE and 5G.
Adding the NG112 LTE eCall option MX703330E-041 to the MX703330E supports performance of the NG-eCall test and end-to-end voice evaluation defined in CEN/TS 17240: 2018 using a simulated LTE network. Furthermore, adding the NG112 LTE eCall Semi Normal Test Option MX703330E-042 facilitates support for the semi-normal test specified in the same standard.

Korean eCall Test

This test evaluates IVS supporting the South Korean eCall over LTE (using NG-eCall standard). Adding the South Korean eCall Option MX703330E-047 to the MX703330E supports performance of the South Korean eCall test and end-to-end voice evaluation defined in ITSK-WD-19003*.

* ITSK-WD-19003: Standard related to methods for testing interface between ITS Korea eCall (uses NG-eCall standard) terminal and remote server.

Configuring eCall Compliance to Application Test Environments

eCall Application Testing

Some IVS have requirements for both calling and Telematics functions while driving. Figure shows the handover between base stations during driving.
Figure shows the situation when the IVS switches from a 4G network connection used by Telematics services during driving to a 2G/3G network connection for eCall functions when an accident occurs.
To emulate this type of test environment, the MD8475B and eCall Tester software perform the handover and CS Fallback switching tests in combination with the eCall function test.

Requires Multi-Cell Option MX703330E-061.
One-touch handover test settings save time and eliminate user worries. The following cells are supported.

	LTE	W-CDMA	GSM
LTE*	—	✓	✓
W-CDMA	✓	✓	✓
GSM	✓	✓	✓

*: VoLTE not supported

These tests help to greatly improve IVS quality and reliability.

Signalling Tester MD8475B Automation Functions

Regression Tests Necessity

Verification of existing functions and regression testing are key elements of software update testing during UE development. Automated and repeated testing of known items to confirm the absence of new software bugs plays a major role in improving development efficiency and cutting costs.
Automated Testing with SmartStudio: SmartStudio Manager MX847503A

The SmartStudio Manager MX847503A software is for editing test sequences and running created test sequences automatically and continuously. This software automates manual testing using the SmartStudio MX847570A software. Automated, unmanned operation test improves efficiency. Additionally, Pass/Fail results can be reported along with the continuous test.

Test Sequence Editing Screen

1. Configure RAT & Network (SimParameters)
2. Configure BTS (Cell Parameters)
3. Start Simulation
4. Wait UE response

Test Sequence Continuous Execution Screen

Test Sequence Continuous Execution Results Display

Signalling Tester MD8475B Automation Functions

Regression Tests Necessity

UE Operation Auto-Recording/Auto-Executing: Smartphone Control Platform MX847504A

The MX847504A software option can records Android OS smartphone operations and offers an environment for creating, editing and running UE automated control scripts. Regression and stable operation confirmation testing of UE are easy using the intuitive editing environment with pre-installed scripts and GUI.

Android™ is a trademark of Google Inc.

Regression Tests and Test Sequences

SmartStudio Manager has various test sequences over 180. These test sequences can be used to confirm basic UE operations, such as making and answering voice calls and SMS messages, as well as measuring throughput. Users can use the AT command interface and Smartphone Control Platform MX847504A to control the UE remotely and perform continuous testing without hands-on UE operation.

Test Sequences (extract)

Category	Procedure	Comment

Main Frame Options

Extended RF MD8475B-002
This option is required to simulate the operation of three or more base-station cells. It supports 8Tx/4RX using the MD8475B.

Fading IO Option MD8475B-004
Combining the Signalling Tester MD8430A with the fading option and the MD8475B supports configuration of a fading test environment.

IP Extension Option MD8475B-005
This option enables FTP throughput testing with multiple external servers.

Multi-cell Software MX847502B
This option is required when simultaneously activating two or more cells such as at handover tests within the same system, Inter-RAT tests between different systems, LTE Carrier Aggregation tests, etc.

Multimedia Interface Software MX847508B
This option is required when performing end-to-end voice tests with microphones and speakers (headset) connected to the MD8475B. It can be used for W-CDMA and GSM AMR-NB (AMR Narrowband), GSM EFR (Enhanced Full Rate Speech), FR (Full Rate Speech), and HR (Half Rate Speech) codecs.

AMR-WB MX847508B-001
This option supports the W-CDMA AMR-WB (AMR Wideband) codec. It requires the MX847508B.

Supported voice codec list

Supported Codecs	Multimedia Interface Software MX847508B	AMR-WB MX847508B-001
AMR-NB (W-CDMA/GSM)	✓	—
GSM-EFR (GSM)	✓	—
GSM-FR (GSM)	✓	—
GSM-HR (GSM)	✓	—
AMR-WB (W-CDMA)	—	✓

SmartStudio MX847570B
This software supports the user interface for scenario-less testing. In addition to offering functions such as sending and receiving SMS messages, sending and receiving ETWS/CMAS messages, making and receiving voice calls, and sending and receiving data packets, it also supports CSCF server functions required for IMS service tests.

• Support Service

MX847570B 1Year Support Service MX847570B-SS110
This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

W-CDMA

• Basic Configuration (Voice/Video/Packet)
Multi-signalling Unit MD8475B-070
W-CDMA Simulation Software MX847510B
W-CDMA Option MX847570B-010
These are for basic W-CDMA configuration. These tests support voice, videophone, packet, and SMS tests.

• Options
HSPA Evolution/DC-HSDPA Option MX847510B-011
HSPA Evolution/DC-HSDPA Option MX847570B-011
These options support HSPA Evolution and DC-HSPA packet communications tests for high-speed packet services used by W-CDMA systems.

* These UE Category tables show the case when MD8475B-071 is installed.

• **Options**

LTE 2×2 MIMO Option MX847550B-020
This option adds 2×2 MIMO to the MX847550B.

LTE 4×4 MIMO Option MX847550B-021
This option adds 4×4 MIMO to the MX847550B.

LTE Licensed Assisted Access (LAA) Option MX847550B-030
This software option provides LTE Licensed Assisted Access (LAA) capability that can be used with the MIMO options and the Carrier Aggregation Options.

LTE Carrier Aggregation Option MX847550B-040
This software option supports LTE 2CC Carrier Aggregation.
It supports the 2CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 2CC MIMO test environment.

LTE Carrier Aggregation DL3CCs Option MX847550B-041
This software option supports LTE 3CC Carrier Aggregation.
It supports the 3CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 3CC MIMO test environment.

LTE Carrier Aggregation DL4CCs Option MX847550B-042
This software option supports LTE 4CC Carrier Aggregation.
It supports the 4CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 4CC MIMO test environment.

LTE Carrier Aggregation DL5CCs Option MX847550B-043
This software option supports LTE 5CC Carrier Aggregation.
It supports the 5CC SISO test environment. Additionally, installing the MX847550B-020 software supports the 5CC MIMO test environment.

LTE RoHC Option MX847550B-060
This option adds better compression algorithms to improve LTE IP packet transfer efficiency.

Supported Profiles

IP	Profile
0x0000	No compression (LTE)/Uncompressed (UMTS)
0x0001	RTP/UDP/IP
0x0002	UDP/IP

LTE 20 Layers Extension Option MX847550B-070
This option enables LTE 20 Layers (LTE 5CC, 4×4 MIMO) testing.
If this option is not installed, LTE 16 Layers (4×4 MIMO for 3CCs and 2×2 MIMO for 2CCs out of LTE 5CCs) is maximum.

GSM

• **Basic Configuration**

GSM Signalling Unit MD8475B-020
GSM/GPRS Simulation Software MX847520B
GSM Option MX847570B-020
This is the basic configuration for performing GSM/GPRS tests.
It supports voice and packet communications tests, SMS sending and receiving, etc. Additionally, it can be used for evaluating application functions using EGPRS communications for EGPRS high-speed data communications.

Supported EGPRS Specifications

Layer 1	Frequency Bandwidth	850, 900, 1800, 1900 MHz
	Modulation & Coding Scheme	MCS 1, 2, 3, 4 (GMSK) MCS 5, 6, 7, 8, 9 (8PSK)
	Number of Slots	Up to Multi Slot Class 12 (DL: 4/UL: 4/SUM: 5)
	Channel Combination	Combination 11 & 13
Layer 2, 3	Broadcasting Control Channel	BCCH/CCCH, PBCCH/PCCH
	ARQ Type	Type 1
	Window Size	64 to 192
Standard		3GPP Release 99

TD-SCDMA

• Basic Configuration

TD-SCDMA Signalling Unit MD8475B-040
TD-SCDMA Simulation Software MX847540B
TD-SCDMA Option MX847570B-040

These are for basic TD-SCDMA/TD-HSUPA*¹ configuration which support voice, videophone, packet, and SMS tests.

3GPP TS 25.306
TD-HSDPA

HS-DSCH category	Maximum number of HSDSCH codes per timeslot	Maximum number of HSDSCH timeslots per TTI	Maximum number of HSDSCH transport channel bits can be received within an HSDSCH TTI	Total number of soft channel bits	Maximum Throughput [bps]
Category 1 to 3	16	2	2788	11264	557600
Category 4 to 6	16	2	5600	22528	1120000
Category 7 to 9	16	3	8416	33792	1688200
Category 10 to 12	16	4	11226	45056	2245200
Category 13 to 15	16	5	14043	56320	2808600

TD-HSUPA

E-DCH category	Maximum number of E-DCH timeslots per TTI	Maximum number of E-DCH transport channel bits that can be received within an E-DCH TTI	Maximum Throughput [bps]
Category 1	2*²	2754	550800
Category 2	3*²	4162	832400
Category 3	2*²	5532	1106400
Category 4	3*²	8348	1669600
Category 5	4*²	11160	2232000
Category 6	5*²	11160	2232000

*1: MX847570B supports Category 6 only.
*2: One timeslot supports two physical channels when 16QAM not used.

IMS Options

IMS Script Basic Option MX847570B-060

This software supports scripting of the communication procedure between the test UE and CSCF server using a ladder sequence to provide a very flexible and expandable test environment.

XCAP Script Option MX847570B-061

This option provides a test environment with high flexibility and expandability for creating scripts using a ladder sequence to edit XCAP messages between the UE and server without the need to prepare an actual server.

IMS Log Import Option MX847570B-062

This software option enables importing Wireshark logs, and create IMS script automatically. This Script is editable using Add-in Sever window. This option help flexible evaluation of IMS.

Extended CSCF Option MX847570B-080

This software option adds functions for calling from the network to UE as well as extended functions for CSCF-server-side network congestion and no response status.

IMS Supplementary Service Option MX847570B-081

This software option adds other service tests, including VoLTE caller ID display, call forwarding, call holding, etc.

RCS Basic Option MX847570B-083

This software option simulates RCS services. It is used to perform tests including RCS Configuration, Registration, Instant Messaging, etc.

GBA Authentication Option MX847570B-084

This option has the 3GPP GBA Authentication algorithm, authentication procedure and parameter settings for simulating GBA operations.

IMS Early Media Option MX847570B-085

This software supports IMS Early Media sequence tests. It can be used to confirm customized call tone services at the network side, such as NRBT (Network Ring Back Tone) and CAT (Customized Alerting Tone).

RTP Frame Control Option MX847570B-086

This option is for controlling media data (RTP packets) during VoLTE communications. It can be used to configure a voice environment in the MUTE status and with fixed data; a measurement environment can be configured for abnormal audio quality verification and battery power consumption tests in a fixed state.
This option also supports UN-R144 compliant VoLTE (EVS) audio call tests. It can be used for WB AMR 12.65 kbps and EVS 13.2 kbps codecs.

• Support Service (IMS options)

MX847570B-060 1-Year Technical Support Service MX847570B-TS160
This contract offers customers support for technical enquiries for 1 year.

MX847570B-061 1 Year Technical Support Service MX847570B-TS161
This contract offers customers support for technical enquiries for 1 year.

WLAN Offload Options

WLAN Offload Basic Option MX847570B-070

This software option provides an EAP authentication server for performing EAP over RADIUS communications (EAP-SIM/EAP- AKA) between a WLAN access point and the EAP authentication server. Additionally, data access by the physical bearers is displayed to verify the 3GPP/WLAN switchover.

ePDG Option MX847570B-071

This software option provides an ePDG server for testing the UE functions at Untrusted non-3GPP Access by running IKEv2 key exchanges and IPsec communications between the UE and ePDG. It requires the MX847570B-070 option as well.

ANDSF Option MX847570B-072

This software option provides the ANDSF function for testing the UE functions after ANDSF policy distribution to the UE. It requires the MX847570B-070 options as well.

Extended ePDG Option MX847570B-073

This software option supports configuration of an ePDG status fault test environment for inserting errors into the ePDG sequence, setting timeouts, etc. Additionally, this option can be used to support Fast Re-Authentication (EAP-SIM/EAP-AKA) tests without the need to generate UE-side authentication keys. It requires the MX847570B-070/ MX847570B-071.

eCall Options

eCall Tester (USB License) MX703330E-PL010
eCall Tester (Software License) MX703330E-PL020

This option simulates the PSAP used by eCall services to support the eCall sequence (MSD call → Voice call) between the IVS and PSAP at a road accident.

The following test standards are supported:

- TS 26 .267 V8.6.0 (2011-03)
- TS 26 .268 V8.6.0 (2011-03)
- EN15722: 2015
- EN16062: 2015
- EN16454: 2015
- ISO3779: 2009

This option can be used as a test environment for model authentication in accordance with the EN16454 recommendations. This option provides audio replay and record functions.
The MX703330E-PL010 license is supplied using a USB stick (dongle); use it by inserting the USB dongle into the PC.
The MX703330E-PL020 license is supplied as software; use it by installing the software in the PC without using a USB dongle. Either license method can be selected.

MSD ERA GLONASS Option MX703330E-031

This option supports the MSD data communications function over SMS used by the ERA-GLONASS system
The following test standards are supported:

- GOST R 54619-2011
- GOST R 54620-2011
- GOST R 54721-2011
- GOST R 55530-2013

EGTS Server ERA GLONASS Option MX703330E-032

This option provides a test environment to send/receive and encode/ decode EGTS messages defined in the GOST R 54619/54620. MX703330E-031 is separately required.

NG112 LTE eCall Option MX703330E-041

This option provides functional tests for MSD data communication and voice call over IMS defined in the CEN/TS 17240: 2018 standard.

NG112 LTE eCall Semi Normal test Option MX703330E-042

Supports semi-normal test defined in CEN/TS 17240: 2018.

South Korean eCall Option MX703330E-047

Supports South Korean eCall test and end-to-end voice evaluation defined in ITSK-WD-19003.

Multi-Cell Option MX703330E-061

This option provides the handover test environment required when setting two or more cells as well as the CS Fallback test environment at the eCall environment. Practical eCall module tests are supported using this option.
The cell combinations are as follows:

	LTE	W-CDMA	GSM
LTE*	—	✓	✓
W-CDMA	✓	✓	✓
GSM	✓	✓	✓

*: VoLTE is not supported

• Support Service

MX703330E 1-Year Support Service MX703330E-SS110

This service contract offers customers 1 year of support for technical enquiries as well as updates to the latest software versions adding extra functionality and bug fixes via downloads from the web page.

SSM Test PKG European eCall MX847503A-601

This test package provides automated test environment. Opening the test case on the SSM, it shows test procedures of test items defined in the (EC) 2017/79 and EN16454, and automatically configures the setting of MD8475B and eCall tester.
This test package also has report functions for each standards.

SSM Test PKG GOST 33467 MX847503A-701

This test package provides automated test environment. Opening the test case on the SSM, it shows test procedures of test items defined in the GOST33467, and automatically configures the setting of MD8475B and eCall tester.
This test package also has report functions for each standards.

Scenario Tools

SIDE Software MX847580B
SIP Option MX847580B-018

These software are for executing scenarios created using the MX843080A Scenario Integrated Development Environment in combination with the MX847510B, MX847520B, and MX847550B software.

Ciphering Option

W-CDMA Ciphering Option MX847510B-050

This option adds the W-CDMA ciphering function[1, 2] and supports for KASUMI (3GPP-recommended algorithm).

GSM/GPRS Ciphering Option MX847520B-050

This option adds the GSM/GPRS ciphering function[1, 2] and supports both the GSM A5/1, A5/2, and A5/3 ciphering algorithms as well as the GPRS GEA/1, GEA/2, and GEA/3 ciphering algorithms.

TD-SCDMA Ciphering Option MX847540B-050

This option adds the TD-SCDMA ciphering function[1, 2] and supports SNOW 3G (3GPP-recommended algorithm).

LTE Ciphering Option MX847550B-050

This option adds the LTE ciphering function[1, 2] and supports SNOW 3G (3GPP-recommended algorithm) and AES.

[1]: Does not work with MX847570B.
[2]: The Integrity Algorithm does not require this option.

Upgrade Kits*

MD8475A to MD8475B Upgrade MD8475B-UG101
MD8475A to MD8475B Upgrade (with Ciphering) MD8475B-UG102
MD8475A to MD8475B Upgrade (with SIDE) MD8475B-UG103
MD8475A to MD8475B Upgrade (with Ciphering/SIDE) MD8475B-UG104
Windows 7 to Windows 10 Upgrade MD8475B-UG105
MD8475A to MD8475B Upgrade MD8475B-UG201
MD8475A to MD8475B Upgrade (with Ciphering) MD8475B-UG202
MD8475A to MD8475B Upgrade (with SIDE) MD8475B-UG203
MD8475A to MD8475B Upgrade (with Ciphering/SIDE) MD8475B-UG204
Windows 7 to Windows 10 Upgrade MD8475B-UG205

These retrofit kits upgrade the MD8475A in use to the MD8475B.

MSU Upgrade MD8475B-UG170
MSU Upgrade MD8475B-UG270

When upgrading the MD8475A in use to the MD8475B specifications, if a legacy unit such as the MD8475A-010 or MD8475A-040 is installed that cannot be transferred to the MD8475B-070 Multi-signalling Unit, the legacy unit must be changed to the MD8475B-070 with these retrofit kits.

*: Upgrade kit models vary according to the configuration of the MD8475A options in use; contact our sales section for more details.

eMSU Upgrade MD8475B-UG171
eMSU Upgrade MD8475B-UG271

The MD8475A-011, MD8475A-050 and MD8475A-070 can be changed to the MD8475B-071 when upgrading the MD8475A to the MD8475B.

eMSU Upgrade MD8475B-UG179
eMSU Upgrade MD8475B-UG279

The MD8475B-070 can be changed to the MD8475B-071.

Automation Tool

SmartStudio Manager MX847503A

This option increases the efficiency of evaluations by automating manual tests performed by the MX847570B SmartStudio software. In addition, the package includes test sequences required for evaluating basic functions.

Smartphone Control Platform MX847504A

Using this option, Android OS smartphone operations can be recorded via ADB and UE automated control scripts can be created, edited and run. As well as supporting automated control from the MX847503A, two-way automatic control of the measuring instrument and UE supports an operator-free test environment for higher test efficiency.

Signalling Tester MD8475B Specifications

RF Connector	RF Input/Output connector (Main, Aux 1, Aux 2)
	  Connector: N (j) type, Impedance: 50Ω
	  VSWR (Main): ≤1.9 (350 MHz to 3.8 GHz), ≤2.0 (3.8 GHz to 6.0 GHz)
	  VSWR (Aux1, 2): ≤1.5 (350 MHz to 3.8 GHz), ≤1.6 (3.8 GHz to 6.0 GHz)
	Output connector (DL Output 1 to 8)
	  Connector: SMA (j) type, Impedance: 50Ω
	  VSWR: ≤1.5 (350 MHz to 3.8 GHz), ≤1.6 (3.8 GHz to 6.0 GHz)
	Reference oscillator
	  Frequency: 10 MHz
	  Level: TTL level
	  Connector: BNC (j) type
	  Startup characteristics: ≤5 × 10^{-8} (10 minutes after power-on, referenced to frequency 24 hours after power-on)
	  Aging rate: 2 × 10^{-8}/day, ≤1 × 10^{-7}/year (referenced to frequency 24 hours after power-on)
	  Temperature characteristics: ≤5 × 10^{-8}
	  Frequency Accuracy at Shipment: ±2.2 × 10^{-8} (At +20°C to +30°C, 1 hour after power-up)
	External reference input
	  Frequency: 10 MHz, Acceptable frequency range: ±1.0 ppm, Level: ≥0 dBm, Impedance: 50Ω, Connector: BNC (j) type

Transmission Characteristics	Frequency
	  Frequency range: 350 MHz to 6.0 GHz
	  Setting resolution: 100 kHz (Depending on MX847501B used)
	  Accuracy: Based on reference oscillator accuracy
	Output level
	  Level range: (Main, Aux1, Aux2): LTE : –130 to –27 dBm (350 MHz to 3.8 GHz), –130 to –32 dBm (3.8 GHz to 6.0 GHz)
	                         W-CDMA : –130 to –27 dBm (350 MHz to 3.6 GHz)
	                         Others : –130 to –25 dBm (350 MHz to 3.6 GHz)
	  Level Range (DL Output 1 to 8): LTE : –115 to –5 dBm (350 MHz to 3.8 GHz), –115 to –10 dBm (3.8 GHz to 6.0 GHz)
	                              W-CDMA: –115 to –5 dBm (350 MHz to 3.6 GHz)
	                              Others: –115 to –3 dBm (350 MHz to 3.6 GHz)
	  Resolution: 0.1 dB
	  Level Accuracy (Main): –120 dBm ≤ Output Level, after CAL, excluding other effects of internal signal generator
	                ±1.7 dB (350 MHz to 3.8 GHz, +20°C to +30°C)
	                ±2.0 dB (3.8 GHz to 6.0 GHz, +20°C to +30°C)
	  Level Accuracy (Aux 1, Aux 2): –120 dBm ≤ Output Level, after CAL, excluding other effects of internal signal generator ±1.0 dB
	                ±1.0 dB (350 MHz to 3.8 GHz, +20°C to +30°C)
	                ±1.3 dB (3.8 GHz to 6.0 GHz, +20°C to +30°C)
	  Level Accuracy (DL Output 1 to 8): –110 dBm ≤ Output Level, after CAL
	                    ±1.0 dB (350 MHz to 3.8 GHz, +20°C to +30°C)
	                    ±1.3 dB (3.8 GHz to 6.0 GHz, +20°C to +30°C)
	Signal purity
	  Non-harmonic spurious: ≤–30 dBc (at ≥100 kHz frequency offset)
	  Harmonics: ≤–25 dBc
	Modulation Accuracy : At +20°C to +30°C
	  W-CDMA: ≤3.5%rms (350 MHz to 2.7 GHz)
	  GSM: ≤1.5°rms (350 MHz to 2.7 GHz)
	  LTE: ≤3.5%rms (400 MHz to 6.0 GHz)

Reception Characteristics	Frequency
	  Frequency range: 350 MHz to 6.0 GHz
	  Setting resolution: 100 kHz (Depending on MX847501B used)
	Level
	  Maximum input level: +35 dBm (Average)

General	Display: Color TFT LCD screen, 12.1 inches (WXGA), 1280 × 800 dots
	External interface
	  Trigger I/O: BNC (j)
	  Call Processing Timing I/O: 15-pin mini D-Sub (f) connector
	  Call Processing Ethernet A/B: RJ-45 connector, 10Base-T/100Base-TX/1000Base-T
	  Measure Ethernet: RJ-45 connector, 10Base-T/100Base-TX/1000Base-T
	  Headphone: 3.5-mm dia. headphone jack
	  Microphone: 3.5-mm dia. microphone jack
	  USB (Type-A) × 2 (Back Panel)
	  USB (Type-A) × 4 (Front Panel)
	  GPIB: IEEE488 connector
	  VGA: Mini D-Sub connector
	  Ethernet 0/1: RJ-45 connector, 10Base-T/100Base-TX/1000Base-T
	  ARB : Mini D-sub connector
	  Sync Input: BNC (j) x 1, Output : BNC (j) ×2

Power Supply	100 VAC to 120 VAC (±10%)/200 VAC to 240 VAC (–10%/+10%, Max.: 250 Vac), 50 Hz to 60 Hz (Rating), ≤1350 VA (Max.)
Dimensions and Mass	426 (W) × 221.5 (H) × 578 (D) mm (excl. protrusions), <40 kg (with all options)
Temperature Range & Humidity	Operation: +5°C, to +40°C, Storage: –20°C, to +60°C, ≤90% (no condensation)

CE	EMC	2014/30/EU, EN61326-1, EN61000-3-2
	LVD	2014/35/EU, EN61010-1
	RoHS	2011/65/EU, EN50581

Signalling Tester MD8475B Ordering Information

Please specify the model/order number, name and quantity when ordering.
The names listed in the chart below are Order Names. The actual name of the item may differ from the Order Name.

Model/Order No.	Name
	Main Frame
MD8475B	Signalling Tester
	Standard Accessories
MX847500B	Platform Software
MX847501B	Control Software
J1211	POWER CORD.3M
P0031A	USB Memory
P0035B	W-CDMA/GSM Test USIM (Standard UICC size)
P0035B7	W-CDMA/GSM Test USIM (Micro UICC Size)
J1440A	LAN Cable (3 m)
Z0541A	USB Mouse
Z0975A	Keyboard (USB)
A0131A	Handset
	Hardware Options
MD8475B-002	Extended RF
MD8475B-004	Fading IO Option
MD8475B-005	IP Extension Option
	Software Options
MX847502B	Multi-cell Software
MX847506B	Quick TRX Diagnosis
MX847508B	Multimedia Interface Software
MX847508B-001	AMR-WB
	User Interface
MX847570B	SmartStudio
MX847570B-010	W-CDMA Option
MX847570B-011	HSPA Evolution/DC-HSDPA Option
MX847570B-020	GSM Option
MX847570B-050	LTE Option
MX847570B-051	LTE Carrier Aggregation Option
MX847570B-052	LTE Licensed Assisted Access (LAA) Option
MX847570B-060	IMS Script Basic Option
MX847570B-061	XCAP Script Option
MX847570B-062	IMS Log Import Option
MX847570B-070	WLAN Offload Basic Option
MX847570B-071	ePDG Option
MX847570B-072	ANDSF Option
MX847570B-073	Extended ePDG Option
MX847570B-080	Extended CSCF Option
MX847570B-081	IMS Supplementary Service Option
MX847570B-083	RCS Basic Option
MX847570B-084	GBA Authentication Option
MX847570B-085	IMS Early Media Option
MX847570B-086	RTP Frame Control Option
	LTE System
MD8475B-070	Multi-signalling Unit
MD8475B-071	Enhanced Multi-signalling Unit
MX847550B	LTE Simulation Software
MX847550B-020	LTE 2×2 MIMO Option
MX847550B-021	LTE 4×4 MIMO Option
MX847550B-030	LTE Licensed Assisted Access (LAA) Option
MX847550B-040	LTE Carrier Aggregation Option
MX847550B-041	LTE Carrier Aggregation DL3CCs Option
MX847550B-042	LTE Carrier Aggregation DL4CCs Option
MX847550B-043	LTE Carrier Aggregation DL5CCs Option
MX847550B-060	LTE RoHC Option
MX847550B-070	LTE 20 Layers Extension Option
	W-CDMA System
MD8475B-070	Multi-signalling Unit
MX847510B	W-CDMA Simulation Software
MX847510B-011	HSPA Evolution/DC-HSDPA Option

Model/Order No.	Name
	GSM System
MD8475B-020	GSM Signalling Unit
MX847520B	GSM/GPRS Simulation Software
	TD-SCDMA System

	Technical Support Services
MX847570B-TS160	MX847570B-060 1 Year Technical Support Service
MX847570B-TS161	MX847570B-061 1 Year Technical Support Service
MX703330E-TS110	MX703330E 1 Year Technical Support Service
	Upgrade Kits*
MD8475B-UG□01	MD8475A to MD8475B Upgrade
MD8475B-UG□02	MD8475A to MD8475B Upgrade (with Ciphering)
MD8475B-UG□03	MD8475A to MD8475B Upgrade (with SIDE)
MD8475B-UG□04	MD8475A to MD8475B Upgrade (with Ciphering/SIDE)
MD8475B-UG□05	Windows 7 to Windows 10 Upgrade
MD8475B-UG□70	MSU Upgrade
MD8475B-UG□71	eMSU Upgrade (MD8475A to MD8475B)
MD8475B-UG□79	eMSU Upgrade (MD8475B-070 to MD8475B-071)
	Warranty
MD8475B-ES210	2 Years Extended Warranty Service
MD8475B-ES310	3 Years Extended Warranty Service
MD8475B-ES510	5 Years Extended Warranty Service

*: MD8475B-UG □ ##
    □: Select from the following according to the option type.
    1: Retrofit option (Must be returned to factory in Japan)
    2: Retrofit option (Must be returned to service center outside of Japan)

Signalling Tester MD8475B Ordering Information

Model/Order No.	Name
	Application parts
B0703A	Rack Mount Kit
B0726A	Carrying Case
J0004	Coaxial Adaptor (N (male)-SMA (female))
J0127A	Coaxial Cord, 1.0 m (BNC-P · RG58A/U · BNC-P)
J0127B	Coaxial Cord, 2.0 m (BNC-P · RG58A/U · BNC-P)
J0322B	Coaxial Cord, 1.0 m
J0322D	Coaxial Cord, 2.0 m
J0658	Adapter (SMA male-female L-type)
J0576B	Coaxial Cord, 1.0 m (N-P · 5D-2W · N-P)
J0576D	Coaxial Cord, 2.0 m (N-P · 5D-2W · N-P)
J1263	W-CDMA Interface Cable (UE connection cable)
J1287	HDD-SUB15P Cable (milli-inch, for connecting MN8110B)
J1333A	HDD-SUB15P Crossover Cable (inch)
J1398A	N-SMA ADAPTOR
J1416A	LVDS Cable
J1440A	LAN Cable
J1489A	PP2S OUTPUT CABLE
J1524A	Dsub15-BNC Conversion Cable

Model/Order No.	Name
J1609A	Signal Divider
J1651A	MD8475A Sync In Cable (for 3CC Test)
J1674A	SMA/P-SMA/P Soft Rigid Cable
J1674E	SMA/P-SMA/P Soft Rigid Cable (5 pcs)
J1674K	SMA/P-SMA/P Soft Rigid Cable (10 pcs)
MN8150A	RF Combiner Unit
P0035B	W-CDMA/GSM Test USIM (Standard UICC Size)
P0035B7	W-CDMA/GSM Test USIM (Micro UICC Size)
P0135A6	Anritsu Test UICC GA (nano UICC Size)
P0135A7	Anritsu Test UICC GA (Micro UICC Size)
P0250A6	Anritsu Test UICC GT (nano UICC Size)
P0250A7	Anritsu Test UICC GT (Micro UICC Size)
P0260A6	Anritsu Test UICC GM (nano UICC Size)
P0260A7	Anritsu Test UICC GM (Micro UICC Size)
Z0749	MN8110B + Inch Screw Cable (for call processing I/O)
Z1858A	Divider (2 way)
Z1859A	Divider (3 way)
Z1908E	Standard Desktop for SSM
Z1919B	Standard Desktop for WLAN
