dBm, dB $\mu$ V (Terminated, Open)

### Resolution

0.01 dB

### Switching Speed

$\leq 600 \mu$ s

(When frequency is  $> 187.5$  MHz within output level accuracy specification range)

However, the output level is  $\leq +7$  dBm when neither the MG3710E-041 nor MG3710E-071 is installed.

This is defined as the period from detection of the List function execution trigger until the time when the frequency is within  $\pm 0.2$  dB of the final output level.
